

TruGround Conductive Primer Product Summary

Product Description and Value

- **TruGround Conductive Primer** (patented) is a water-based electrically conductive primer. The product was specifically developed for use with Electronic Leak Detection (ELD) testing and constant monitoring systems. **TruGround** is NOT intended to replace required adhesives and primers. Required adhesives and primers must be applied after **TruGround** has been applied and is dry.
- A surface treated with **TruGround** can be used with any of **Detec's** Electronic Leak Detection methods.
- **TruGround** should be applied to any properly prepared nonconductive horizontal or vertical surface immediately below the waterproof membrane (i.e. plywood, insulation, cover board, etc.). Once applied, the membrane can be electronically tested for the life of the building should any future breaches occur.
- **TruGround** can be used for quality assurance on newly installed waterproof membranes, and for regular maintenance, warranty, and forensic purposes.
- The value of **TruGround** extends the life of the membrane assembly.

Features and Benefits

- Quick drying
- Environmentally friendly low VOC
- Easily applied by brush, roller, or spray
- Cleanup with soap and water
- Non-flammable
- Excellent adhesion properties
- Compatible with low voltage and high voltage testing
- Made in the USA
